Meenaketan Padhy

Software Engineer | Full-Stack & Mobile Development
meenaketanpadhy7@gmail.com | +91 7008746872 | linkedin.com/in/meenaketan | github.com/Meenaketan7

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Swift, Java, SQL, Bash, Elixir
Frontend & Mobile: React, Next.js, React Native, Redux Toolkit, Zustand, Tailwind CSS, Vite, React Query, React Flow
iOS & Simulation: SwiftUI, UIKit, AVAudioEngine, Core Haptics, SIMD
Backend & APIs: Node.js, NestJS, Express, FastAPI, Bun, Elysia, REST APIs, GraphQL, Apollo, Socket.IO, BullMQ
Databases & Data: PostgreSQL, pgvector, MySQL, MongoDB, SQLite, Redis, Prisma, Mongoose, Drizzle
AI & Agents: Retrieval-augmented generation (RAG), LangGraph
Cloud & Infrastructure: Google Cloud Platform (GCP), Cloud Run, Google Cloud Storage (GCS), Cloud CDN, Terraform, Docker, Kubernetes (K3s), Firebase, Proxmox, Debian, Raspberry Pi, Traefik, MetalLB, Tailscale
Tools & Services: Git/GitHub, NeoVim, Xcode, Postman, Jest, Notifee, CleverTap, Google Maps, 100ms, PubNub, Jitsi, SciChart, Bun, Npm

PROFESSIONAL EXPERIENCE

Senior Software Developer, Good Work Labs July 2024 – Present

Internal Products

- **Genesis AI:** Architected an AI course authoring platform and served as primary engineer from product design through GCP deployment; now lead **five engineers**. Built React UI, NestJS APIs, Drizzle, Bun, pgvector RAG chat, Redis/BullMQ jobs and Cloud Run infrastructure with Terraform for course and media generation, translation, previews, SCORM exports, Bun , and LMS publishing.
- **SmartBot:** Independently designed, built and deployed a framework-agnostic TypeScript sales and support widget for WordPress and web apps, with Bun/Elysia, Drizzle, lead capture, emailed transcripts and Kriatix CRM integration. Extended it into a multi-tenant FastAPI/LangGraph agent with configurable personas, support and product skills, pgvector RAG, tenant isolation and SearXNG/DuckDuckGo web research.
- **Secure EPUB Reader:** Independently designed and built a Kindle-style reader in Next.js and Readium with pagination, search, bookmarks, highlights, progress, customizable themes and typography. Secured paid content with WooCommerce entitlements, email OTP, Drizzle, revocable sessions, authorization for each resource, private GCS and Cloud CDN delivery, scraping protection and session watermarks.
- **NetSkill LMS:** Led and mentored **five engineers** migrating a FlutterFlow platform built two years earlier to React/TypeScript, Bun, admin and learner web apps and React Native mobile in **20 days**. Owned frontend architecture, UI design, reusable components, screen scaffolding and Firebase web deployment.
- **Kriatix CRM:** Led **three frontend developers** and owned frontend delivery for a responsive sales CRM in React and TypeScript with Redux Toolkit and REST APIs. Built lead assignment, pipeline tracking, Gmail and chat histories, records linked to tickets, AI lead extraction from call recordings, proposals and funnel and revenue analytics.

Client: RED.Health

- Led frontend engineering for **RED Assist (app and web)**, **Doctor Consultation** and **Salus v2** for Deutsche Bank, Apollo and Orange Health. Architected React Native RED Assist for emergency booking, teleconsultation, women's safety, real-time alerts and ambulance tracking with Socket.IO and Google Maps.
- Built ER video consultations using 100ms, live vitals streaming with PubNub and waveforms with SciChart. Integrated Firebase, Notifee and CleverTap for push notifications, tracking, chat, video and alerts.
- Built React and Redux Toolkit HR/CHRO dashboards for onboarding, plan configuration and role permissions. Designed **Salus v2** with Vite, React Query, PubNub and Jitsi for ambulance tracking and patient monitoring.

Software Development Engineer, Searching Yard Pvt Ltd April 2023 – May 2024

- Built Android, frontend and backend solutions, reducing enterprise manual operations by **50%**. Improved system performance **50x (300 ms to 6 ms)** with Redis caching and Docker.
- Implemented Socket.IO real-time notifications. Designed authentication, referral rewards and wallet systems for affiliate platforms.
- Led UI and backend development for **Viloop** and **Printbrix** e-commerce apps supporting custom pricing, bulk ordering, B2C personalization and B2B workflows. Owned TypeScript UI development and API integration, improved performance and scalability, and accelerated React and Redux ERP dashboards by **2x to 5x**.

PROJECTS

- **Egress (Evacuation Simulator):** Built an offline iPhone evacuation simulator and deterministic Swift engine from scratch with a teammate. Modeled crowds with social force physics, SIMD, spatial hashing and multi-source BFS; simulated fire with a cellular automaton and smoke with diffusion. Added venue editing, live SwiftUI Canvas visualization, safety scoring and layout fixes with reruns. **Pocket Brain category winner, 2026 IndeHub Hackathon.**
- **Forge (AI Build Planner):** Built and deployed an AI planner with a teammate, turning nontechnical users' ideas into editable architecture diagrams and build backlogs. Used React Flow, Lemma agents, RAG, tables and cloud functions to save designs, check dependencies, guide users from database design through deployment, track progress and generate repository scaffolds after approval. **Top 20 among 400+ submissions, 2026 Gappy.ai–Lemma Hackathon.**
- **Homelab & Self-Hosted Infrastructure:** Built a K3s cluster from two laptops and a Raspberry Pi: control planes on Debian bare metal and in a Proxmox VM, plus a Pi worker. Configured Tailscale remote access, Wake-on-LAN, monitoring, automated replicated backups, recovery scripts and setup and restore documentation. Host Jellyfin, Bitwarden, Pi-hole and Dockerized Minecraft and Stardew Valley servers with access controls and world management.

EDUCATION

Silicon Institute of Technology (SIT) July 2019 – June 2023
B.Tech in Computer Science and Engineering Odisha, India | CGPA: **8.9/10**
